VESTING

VESTING SCHEDULE

Of the total supply of 999 Quadrilles tokens, 90% are locked for a period of 10 years. This will reduce market price manipulation and secure investor interest.

After the first year, 10% of the total tokens will be unlocked each additional year to enable all tokens to be in circulation after year 10.

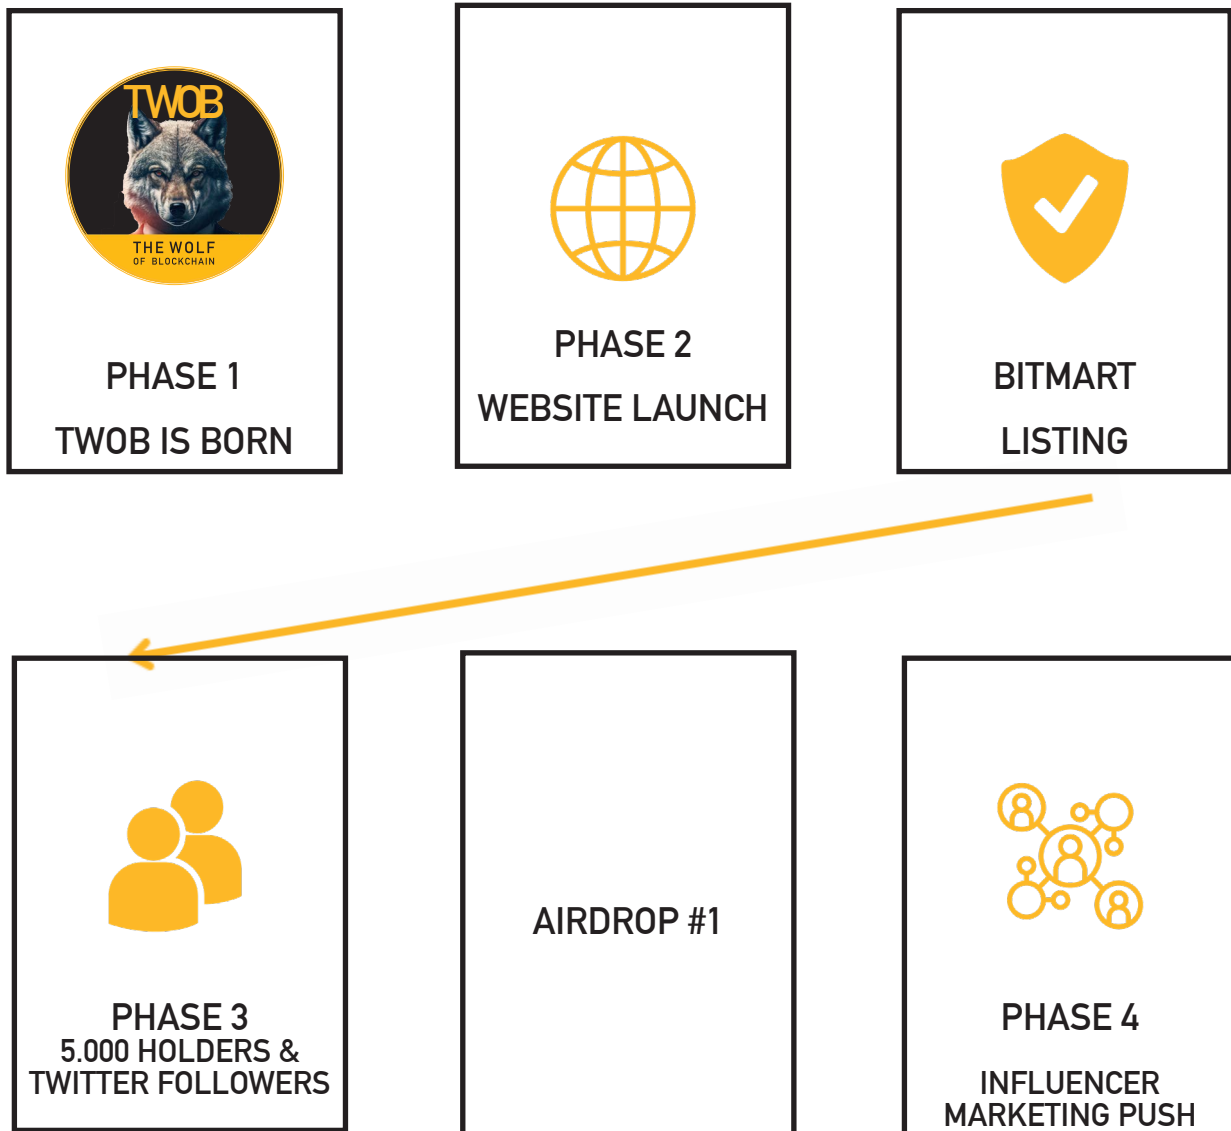

Only the 10% pool reserved for staking is not vested because it will be distributed over the years to users who want to participate in the staking option.

VESTING PLAN

The 10% tokens unlocked each year will be distributed and released to the different sectors of Tokenomics, on a percentage basis. An example: 50% of the tokens are reserved for the ICO. 10% of it, so 5% of the total amount, will be released from it every year. Another way tokens can circulate early is that they are used by users of the TWOB investment platform. This also describes the governance mechanism of the platform. Only after a user has used the token through the platform, it is activated and can be sold through exchanges. With this mechanism, we promote the use of the platform and thus of the token, which in turn is in the interest of investors.
